

BELTING FOR ALL MATERIAL HANDLING APPLICATIONS

Bowman Hollis specializes in belting for distribution centers and warehouses. We stock original equipment or better belting for systems from the following system manufacturers:

- Siemens Dematic
- Buschmann
- Logan
- Caljan
- Axmann
- HK Systems
- Vanderlande
- Hytrol
- Alvey
- Crisplant
- Beumer
- Interlake
- Sandvik CML
- Daifuku

...and many others.

OTHER PRODUCTS AND SERVICES

In addition to belting, Bowman Hollis offers a wide range of additional products and services to the material handling industry. We field splice, install cleats, guides and perforate belts to your specs. We supply casters, conveyor rollers, power transmission products and custom designed safety guards.

MANUFACTURING, INC.

THE RIGHT BELT, AT THE RIGHT TIME!

With two belt fabrication facilities in the Southeast, Bowman Hollis is ideally situated to service you. We react quickly to your needs and our many years of experience ensures we will provide the right belt, at the right time!

HIGH-TECH LIVE ROLLER BELTING SOLUTIONS

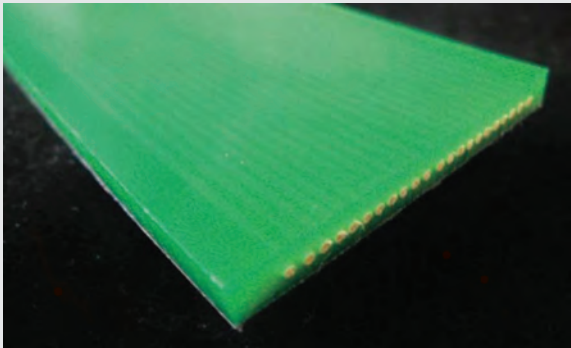

BOWMAN HOLLIS

The premier supplier of belting to distribution centers and warehouses throughout the Southeast.

MANUFACTURING, INC.

If your Distribution Center has the high-tech 1265, or the older 1278, live roller system from Siemens/Dematic, you know that the belt is a proprietary part that can only be obtained through Siemens. With most items, you can shop around, find a suitable replacement and avoid the high OEM replacement costs. That was not possible with this belt. There simply were no other belts that would fit this application - until now. And Bowman Hollis has the solution.....

TF-102T

TF-102T was engineered and designed with an Aramide cord core embedded in Polyurethane which gives the belt high dimensional stability. This means no re-tensioning of the belt and this also makes it suitable for long live roller runs. The Aramide core also has low sensitivity to humidity which means the belt will last longer. TF-102T has been engineered with a high modulus of elasticity. The belt doesn't stretch and maintains consistent contact with the rollers resulting in consistent throughput. This also gives you a higher safety factor for temporary overloads. TF-102T can also be easily spliced right into the existing OEM belt with the OEM tooling. All of this and TF-102T still retains the flexibility to navigate small diameter pulleys and consume less energy. This all adds up to lower cost of ownership for you and your company.

DROP IN REPLACEMENT FOR THE OEM BLUE BELT IN SIEMENS/DEMATIC 1265 OR 1278 WITH IMPROVED PERFORMANCE AND LOWER COST OF OWNERSHIP

TF-102T

TF-102T From Habasit

- * Specifically designed for this application
- * Improved performance over the OEM belt
- * Embedded Aramide fibers ensure no stretching
- * Constant throughput
- * Tough polyurethane roller surface lasts longer and resists spills
- * Easily joined by simple finger splicing, even into OEM material

BENEFITS TO USING BOWMAN HOLLIS

- * You Save Money - No more expensive OEM replacement belts needed
- * Easy To Install - Tools furnished with the system will work fine with TF-102T, you can even splice right into the OEM belt so waste is reduced
- * You Save Money - Smooth roller surface results in better transport of goods and increased throughputs
- * Quick Service - Bowman Hollis stocks this material for immediate shipping
- * You Save Money - TF-102T was engineered and designed to overcome the shortcomings of the OEM belt at a lower cost
- * On Site Service - Our technicians can either install the belts for you, or train your personnel in the proper splicing and installation procedures.
